## Don't Trust Ethanol in Your Tank Without CRC PhaseGuard4™ Ethanol Fuel Treatment

Ethanol-blended fuel can lead to excess water in the fuel system; water in the fuel system can lead to severe corrosion, engine damage and unanticipated shut-down.

PHASEGUARD4™ Ethanol Fuel Treatment provides the maximum corrosion protection available for E10 to E85 fuel.

The cleaning properties of ethanol can loosen varnish and corrosion deposits which then travel through the fuel system. Also, Ethanol is naturally attracted to water and prone to separating from the gasoline and blending with any water molecules in the fuel system. This harmful "phase separation" of the fuel can lead to severe corrosion, decreased fuel economy and engine performance, rough starts and hesitation.

PHASEGUARD4™ prevents phase separation\* with the only 4-in-1 formula that also protects against corrosion, cleans the entire fuel system, stabilizes fuel for long-term storage and restores power and mileage potential.

Laboratory testing proves PHASEGUARD4™ provides better water removal capability (per modified ASTM D 1401) and better corrosion protection (per ASTM D 665) than other leading ethanol fuel treatments.
